# MOCK ELECTIONS and MANUAL AUDIT

## BACKGROUND

- “ SMARTMATIC conducted a mock election and a manual audit on July 24-25, 2012 at the Nograles Hall, House of Representatives, Batasan Complex, Quezon City
- “ 1,000 ballots were used
- “ 958 were read by the PCOS and 42 were rejected

# MANUAL AUDITS

- “ **Does not** measure the accuracy of the **PCOS**
- “ **Only** measures the number of times the human count coincides with the machine count
- “ Human interpretation is unreliable
- “ **Highly Subjective**, humans are prone to tiredness, boredom, inconsistency, etc.

# HUMAN APPRECIATION IS NOT PERFECT

- “ In the process of comparing the PCOS count and the Manual Audit, Human Error becomes a factor despite precautions.
- “ During the Manual Count of the Mock Election results, a variance was noted compared to the Automated Count of the PCOS.

# PCOS COUNT IS **ACCURATE**

- ” Objective
- ” Impartial
- ” Consistent
- ” Not prone to tiredness, boredom, etc.

# PCOS COUNT IS **ACCURATE**

The PCOS **SURPASSED** the requirement of the law (99.995%) and has a proven accuracy of 100%, as it was demonstrated several times during the bidding for the 2010 Elections Automation project, and during the Software Certification.

# PCOS COUNT IS **ACCURATE**

The PCOS machine has been successfully used in different countries and states, providing accurate results.

- . **United States:** New York State
- . **Canada:** Ontario and New Hampshire

# PCOS COUNT IS **ACCURATE**

As per the Certification Entity's report:

*%SLI Global Solutions finds that the Automated Election System is functionally capable of operating properly, **securely and accurately**. %SLI recommends the system for certification, as it is conformant with operational requirements and is suitable for use in applicable **future elections**.*

## PCOS COUNT IS **ACCURATE**

In its decision G.R. No. 188456 upholding the Automated Elections Systems, no less than the Supreme Court stated that the PCOS machine registered **100% accuracy** in all the tests performed.

## PLEASE KEEP IN MIND THAT

The percentages that were derived from the Mock Elections Audit *did not* measure PCOS accuracy, but only the number of times that the Manual Tally results coincided with the PCOS results.

# MANUAL AUDIT RESULTS

POSITION	SMARTMATIC REPORT	ACTUAL RESULT
PRESIDENT	99.99280%	99.2797%
SENATOR	99.98019%	97.9787%
PARTY LIST	99.99740%	99.7403%
HOUSE OF REPRESENTATIVES	99.98031%	98.0315%

# WHY IS MANUAL COUNT **INACCURATE**?

1. Subjectivity in manually determining **Valid Marks**  
Based on the **10%** Threshold
  - While the PCOS would CORRECTLY interpret a vote every single time, humans simply can NOT.
  - One person would look at a mark and interpret it as being at least 10% of the oval, while Another human would see less than 10%

# WHY IS MANUAL COUNT **INACCURATE**?

2. Clerical Errors may occur at any of these steps:
  - . Reading a candidate name
  - . Crediting a vote to a candidate on the tally sheet
  - . Summing the votes of each candidate in the tally sheet

# WHY IS MANUAL COUNT **INACCURATE?**

## 3. Lack of Understanding of Rules:

- . **Under-vote:** Blank Votes and Under-votes are legal. For example, in the Senator position where a voter can select a *maximum* of 12 candidates, voting less than 12 candidates **does not** invalidate the position, and all votes are counted. Crediting a vote to a candidate on the tally sheet
- . **Over-vote:** an over-voted position would result in that particular position not being counted. However, an over-voted position **does not** invalidate the whole ballot.

Given the previous statements, it's  
clear that Manual Count is:

**Subjective and Inaccurate**

# "Post-Election Auditing: Effects of Election Procedure and Ballot Type on Manual Counting Accuracy, Efficiency and Auditor Satisfaction and Confidence"

- ” Research on postelection auditing procedures finds error rates of up to 2%
- ” *“These procedures are intended as a safeguard against computer and human error, but until recently, no research existed to tell whether these efforts helped or hurt the accuracy of the vote”*

Michael Byrne, associate professor at Rice University.

*While many argue manual audits are the “gold standard” by which we must evaluate computerized ballot totals due to the insecure nature of such machines, we must be careful to remember that even the most basic tasks performed by humans can and do introduce error into the process.*
